

Key Performance Indicators (KPIs) and expectations for Research Manager

1. Team & Target Ownership

- Ensure **100% adherence to monthly research targets** by all researchers.
 - Plan and **distribute workload evenly across all 4 capsules**, avoiding overload or quality dilution.
 - Assign **clear daily tasks before the start of each shift** with defined expectations.
 - Actively track underperformance researcher and take **corrective actions within the same week via email**.
-

2. Case Quality, Approval & Ranking

- **Approve every research case** before it moves to scripting.
- Ensure **minimum 98% of approved cases pass QA checks** without major rework.
- **Rank every approved case (Priority 1 / 2 / 3 or A / B / C or High/Medium/Low)** based on:
 - Story strength
 - Emotional impact
 - Visual & narrative potential
 - Platform relevance
- Ensure this **case ranking is clearly visible and communicated** to:
 - Capsule team
 - QA – Script
 - QA – Video

- Have a record that **high-ranked cases receive top-quality scripting and editing**, ensuring the case truly gets justice.
-

3. Strategic Case Judgment & Trend Awareness

- Demonstrate **strong judgment in identifying “best-fit” cases**, not just acceptable ones.
 - Stay updated on:
 - Platform trends
 - High-performing case formats
 - Audience behavior
 - Proactively **guide researchers on what kind of cases to hunt**, not just volume-based research.
-

4. Capsule Balance & Case Bank Management

- Maintain **balanced quality distribution across all capsules**.
 - Ensure a **minimum 7-day approved case bank** for each capsule at all times.
 - Avoid last-minute approvals or forced low-quality cases due to poor planning.
-

5. Productivity, Skill Upgrade & Team Development

- Ensure **new researchers become independently productive within 30 days**.
- Conduct **regular knowledge-sharing sessions** (case examples, research techniques, trend learnings).
- Actively **upgrade your own skills** in:

- Case analysis & storytelling judgment
 - Trend identification
 - Platform understanding (YouTube / Shorts / Reels if relevant)
 - Mentor at least **1–2 researchers per quarter** to grow into high-performing contributors.
-

6. Team Growth & Capability Building

- Identify **skill gaps within the research team** and address them through:
 - Training
 - SOP improvements
 - Shadowing high performers
 - Build a team that can deliver **both quantity and quality**, not dependent on constant escalations.
-

7. Reporting, Feedback & Communication

- Review **daily task completion and quality output** of the team.
 - Share **clear, actionable feedback on time** (no delayed corrections).
 - Escalate risks early (quality, bandwidth, case shortage) with **solutions, not just problems**.
-

8. Leave, WFH & Workforce Management

- Manage all leaves, WFH, and exceptions **without impacting capsule delivery or quality**.

- Ensure proper backup planning and workload redistribution in advance.

9. Ownership & Accountability

- Take **end-to-end ownership of research quality**, not just approvals.
- Be accountable if a strong case fails due to poor initial judgment or ranking.
- Act as the **first gatekeeper of content excellence**, setting the benchmark for the entire pipeline.
