

KPIs of AI

My focus will be divided across three key areas: ensuring model reliability, optimizing our production operations via ClickUp, and driving R&D for new AI solutions.

1. AI Model Lifecycle & Maintenance

- **Production Reliability:** Monitor ongoing and production models to ensure 99% uptime and consistent efficiency.
- **Performance Auditing:** Regularly check model outputs for drift or errors to maintain high-quality standards in our production flow.
- **Implementation of ClickUp:** Make sure that each employee is using clickup correctly and keeping their fields updated

2. Operational Optimization (ClickUp & Workflow)

- **Workflow Automation:** Analyze the current production pipeline and implement ClickUp automations to reduce manual administrative work.
- **Process Efficiency:** Assist in streamlining the production flow to make it easier and faster for the team, focusing on reducing bottlenecks through better tool integration.

3. R&D and Strategic Implementation

- **New Tech Exploration:** Actively research and test new AI models and agents that have the potential to further optimize our specific production use cases.
- **Custom Model Training:** Train or fine-tune lightweight models aimed at solving specific friction points to make our production rapid and scalable.
